I decided to start exploring D3.js and choose to do a Stacked Bar Chart. It resulted in showing the total "skill-point" of every student, where every skill had different color. It is also sorted from the student with the highest total "skill-point" to the one with the lowest.

My idea from the beginning was that it also would be nice to be able to click on the different bars/names and then see all the information about that student. And I think it also would have been nice to be able to filter so it only show the points of a certain skill for all the students. However, this was something I did not manage to do. Maybe next time, when I have had time to learn and explore more.
